

## SmartKlean®

The SmartKlean Laundry Ball is a revolutionary product designed to reduce the amount of toxic chemicals in your home and the environment by completely replacing the use of laundry detergents, fabric softeners and dryer sheets. Being reusable for 365 washes, the laundry ball saves big on money, water, energy and time on shopping. It also reduces packaging waste in the environment. Say good-bye detergents! Our laundry ball provides the quickest, easiest and safest way to do your washing.

### Completely reusable

365 WASHES

One laundry ball could be used over and over for 365 loads on the basis of 18 lbs. (8.5 kg) of clothes per wash.

### Powerful & efficient

The combination of the mineral pellets inside the ball ensure a powerful wash by lifting away dirt, odors and germs, without fading colors and maintaining the elasticity of fibers.

### Chemical-free

Detergents are known to be one of the most toxic household products which can contain ingredients such as petrochemicals, fragrances and surfactants that can trigger headaches, allergies, asthma, skin rashes and even cancer! The SmartKlean® Laundry Ball is toxic-free and leaves no residue behind, making it ideal for babies, children and those with sensitive skin. It reduces skin and respiratory health problems related to the use of chemical-based products in your home. In addition, its use is harmless to the environment and aquatic ecosystems!

### Increases the lifespan of your clothes

Unlike chemical-based detergents, the SmartKlean® Laundry Ball preserves the color, elasticity and overall durability of fabrics. Your clothes will look and feel new, for longer! There is no need for fabric softener or dryer sheets.

### Easy to use

Simply place the ball with your clothes in the washing machine and start it! There will be no more need to measure and handle messy detergent powders or liquids. You may leave the laundry ball in the washer for the next load!

### Saves significantly

Save water, energy, and money! With the SmartKlean® Laundry Ball, you can skip out on the rinse cycle since there are no soapy residues to rinse out! This can save you from 20 to 40 gallons of water in each wash load. Also, bear in mind that 90 percent of the energy used by a washing machine is for heating water. With the laundry ball, hot water is unnecessary, therefore it also helps you save big on energy bills!

### Function

Like detergents, the laundry ball is designed to help water clean. However, SmartKlean's process is PHYSICAL rather than CHEMICAL. It contains four types of ceramics derived from natural Earth minerals, all producing different effects. These ceramic pellets emit ions that weaken the adherence of the dirt and remove it from the fabrics without the need of soap or detergent. The PH balance of the water is raised to a level equivalent to soaps and detergent further helping the water clean and purify. The laundry ball also produces agitation on clothing with its weight during wash cycles, meaning it physically pounds and rubs dirt off clothes similar to the old-fashioned way it was done before washers existed. These are just some of the many great functions of the SmartKlean® Laundry Ball. Visit our website to learn more!

**Practical. Economical. Ecological.**
